

# Contents

<b>Introduction</b> .....	<b>vii</b>	3.5 Solving quadratic equations by factorization and completing the square .....	155
How to use your enhanced online course book .....	ix	3.6 The quadratic formula and the discriminant .....	164
<b>1 From patterns to generalizations: sequences and series</b> .....	<b>2</b>	3.7 Applications of quadratics .....	173
1.1 Number patterns and sigma notation .....	4	Chapter review .....	179
1.2 Arithmetic and geometric sequences .....	13	Modelling and investigation activity.....	182
1.3 Arithmetic and geometric series .....	22	<b>4 Equivalent representations: rational functions</b> .....	<b>184</b>
1.4 Applications of arithmetic and geometric patterns.....	36	4.1 The reciprocal function .....	186
1.5 The binomial theorem .....	44	4.2 Transforming the reciprocal function .....	196
1.6 Proofs .....	55	4.3 Rational functions of the form $f(x) = \frac{ax+b}{cx+d}$ .....	201
Chapter review .....	58	Chapter review.....	209
Modelling and investigation activity.....	60	Modelling and investigation activity.....	212
<b>2 Representing relationships: introducing functions</b> .....	<b>62</b>	<b>5 Measuring change: differentiation</b> .....	<b>214</b>
2.1 What is a function? .....	65	5.1 Limits and convergence .....	216
2.2 Functional notation .....	69	5.2 The derivative function .....	222
2.3 Drawing graphs of functions.....	75	5.3 Differentiation rules .....	234
2.4 The domain and range of a function .....	77	5.4 Graphical interpretation of first and second derivatives .....	240
2.5 Composite functions.....	85	5.5 Application of differential calculus: optimization and kinematics .....	260
2.6 Inverse functions .....	92	Chapter review .....	271
Chapter review.....	101	Modelling and investigation activity .....	274
Modelling and investigation activity.....	106	<b>6 Representing data: statistics for univariate data</b> .....	<b>276</b>
<b>3 Modelling relationships: linear and quadratic functions</b> .....	<b>108</b>	6.1 Sampling .....	278
3.1 Gradient of a linear function .....	110	6.2 Presentation of data .....	283
3.2 Linear functions .....	115		
3.3 Transformations of functions .....	131		
3.4 Graphing quadratic functions .....	142		

6.3 Measures of central tendency .....	287	10.2 More on indefinite integrals .....	439
6.4 Measures of dispersion .....	296	10.3 Area and definite integrals .....	444
Chapter review .....	311	10.4 Fundamental theorem of calculus .....	450
Modelling and investigation activity.....	316	10.5 Area between two curves .....	455
<b>7 Modelling relationships between two data sets: statistics for bivariate data ..... 318</b>		Chapter review .....	461
7.1 Scatter diagrams .....	320	Modelling and investigation activity .....	464
7.2 Measuring correlation .....	326	<b>11 Relationships in space: geometry and trigonometry in 2D and 3D ..... 466</b>	
7.3 The line of best fit .....	329	11.1 The geometry of 3D shapes.....	468
7.4 Least squares regression .....	332	11.2 Right-angled triangle trigonometry .....	475
Chapter review .....	344	11.3 The sine rule .....	484
Modelling and investigation activity .....	350	11.4 The cosine rule .....	489
<b>8 Quantifying randomness: probability ..... 352</b>		11.5 Applications of right and non-right-angled trigonometry .....	492
8.1 Theoretical and experimental probability .....	354	Chapter review .....	499
8.2 Representing probabilities: Venn diagrams and sample spaces .....	363	Modelling and investigation activity.....	504
8.3 Independent and dependent events and conditional probability .....	375	<b>12 Periodic relationships: trigonometric functions ..... 506</b>	
8.4 Probability tree diagrams .....	381	12.1 Radian measure, arcs, sectors and segments .....	508
Chapter review .....	388	12.2 Trigonometric ratios in the unit circle .....	513
Modelling and investigation activity.....	392	12.3 Trigonometric identities and equations .....	517
<b>9 Representing equivalent quantities: exponentials and logarithms ..... 394</b>		12.4 Trigonometric functions .....	523
9.1 Exponents .....	396	Chapter review .....	536
9.2 Logarithms .....	407	Modelling and investigation activity.....	540
9.3 Derivatives of exponential functions and the natural logarithmic function .....	422	<b>13 Modelling change: more calculus .... 542</b>	
Chapter review .....	426	13.1 Derivatives with sine and cosine .....	544
Modelling and investigation activity .....	430	13.2 Applications of derivatives .....	552
<b>10 From approximation to generalization: integration ..... 432</b>		13.3 Integration with sine, cosine and substitution .....	559
10.1 Antiderivatives and the indefinite integral .....	434	13.4 Kinematics and accumulating change .....	567
		Chapter review .....	577
		Modelling and investigation activity .....	580

**14 Valid comparisons and informed decisions: probability distributions .. 582**

14.1 Random variables ..... 584  
14.2 The binomial distribution ..... 592  
14.3 The normal distribution ..... 603  
Chapter review ..... 622  
Modelling and investigation activity ..... 626

**15 Exploration ..... 628**

**Practice exam paper 1 ..... 642**

**Practice exam paper 2 ..... 645**

**Answers ..... 648**

**Index ..... 717**

**Digital contents**

**Digital content overview**

Click on this icon here to see a list of all the digital resources in your enhanced online course book. To learn more about the different digital resource types included in each of the chapters and how to get the most out of your enhanced online course book, go to page ix.

**Syllabus coverage**

This book covers all the content of the Mathematics: analysis and approaches SL course. Click on this icon here for a document showing you the syllabus statements covered in each chapter.

**Practice exam papers**

Click on this icon here for an additional set of practice exam papers.

**Worked solutions**

Click on this icon here for worked solutions for all the question in the book
